

DYNAMICALLY MODIFIABLE USER INTERFACE

Cedric K. R. H. Bouleau

ABSTRACT OF THE DISCLOSURE

5 The present invention provides a user interface that may be dynamically modified by
a user. The user interface is generated from a UI view definition that defines panels and
controls to be included as part of the user interface. The user may modify the UI view
definition and a UI view manager dynamically generates the user interface. Controls are
10 wrapped to include a communication interface to dynamically communicate with the UI view
manager.
